

### Data Leak Crisis Management & Duty of Care

Every company should view cyber security as a company-wide risk management issue, not just an IT issue. Every company should look at their data breach preparedness and business continuity plans to ensure proper response in the event of a data crisis. In a company, everyone has a role to play in maintaining personal safety and securing the continuation of business operations. A data crisis management is one of the most discussed boardroom issues nowadays. After all, knowing who to call in a crisis, and identifying people and equipment that is critical to crisis management and ongoing operations.

This seminar reviews the various types of cyber attacks with real life examples and discuss the duty of care associated with data protection of information for the purpose of determining key liability drivers that service providers should take note on.
