

Course Outline 課程簡介

What's AI? Why it matters? 什麼是人工智能？為什麼重要？

AI is taking over the world, it uses computers to run scientific models that forecast future behaviours, outcomes, and trends. AI has given us algorithm trading, robo-advisors, and improved understanding of human behaviour in the capital market. While AI has been affecting our way of doing business deeply, what is AI? And what it's not? This seminar will give participants a non-technical review of AI combined with practical scenarios and use cases.
